[redacted] dienstverlening,  
[redacted] 1127PE landsmeer(address listed on my kadaster paper.

I will send via file transfer website some drawing a documnets from wageningen and veenweidegebied innovatie centrum. Both have been busy for a long time making innovations in the farming sector

My farm will not sell any products produced they will be eaten by myself and volunteers and employees. So I am a veenweide bedrijf doing a proof of theory for circular farming. Income will come from grond verhogen and natuur inrichten subsidies, also gromd Sandridge subsidie. this type of farming activity falls under the hobby boederij law. The waste from my circular farm will better the natuur by increasing ground height bettering water quality increasing biodiversity and increasing available food sources for wild animals.

here are some quick points attached is loads of documnets xan read about projects in nederlands and worldwide doing the same

Circular farm formula

Animal poops, poop makes heat, poop makes mushrooms, mushrooms.clean bacteria, heat grows more food and warms animals in winter(circular). Mushrooms also decompose wood, they make veengrond, veengrond is needed for animals(circular). In attached can see various calculations that show how surprisingly easy this is too do.

Here's another circular farm calculation

Phytosaniering

Plant sunflowers, absorb heavy metal from ground, make ground cleaner, more space for animals(from animal we xan start the circle again), sunflowers used in combinations with hydrogen(hydrogenation) to make biodiesel that can run in a standard diesel engine. Hydrogen step further xkeans water, the biofeedback can be used by the farm and is co2 negative and cheaper then traditional ground cleaning technics, there fore this biofuels is actually free of cost.

Quick facts too think about.

- veengrond=decomposing plant material
- animal poop can be composted and used for mushroom production
- some mushrooms can live on Wood chips alone(make veen grond from wood) primary decomposes
- heat generated my growing mushrooms can be used too heat low height greenhouses and stall for animals even.
- waist products from the green house and mushroom farm can be mixed with dry peat(10 times lighter then wet peat)
- too male veen ground that is biological active and healthy
- traditional shape of a veengrond island is a pillow, this leads toonrun off in the canals
- I will use nature share of my island so rain water collects in the middle and is drained out 1 side
- pond in the middle can be used for fresh water clams and European crawfish(both endangered)
- income in first 2 years will come from various subsidies provided by the e.u. and the provincie noord holland.. ijperveld grond vergogen subsidie, grond Saneringen subsidie, also since I will be using waste products like wood chips I will be eligible for co2 reduction certificates
- I will documnet all activity as well as do various proof of theories behind the economic feasibility 9f running a circular farm.
- within 2 years time I will prove that farming can be done in a way that benefits environment, can clean the ground recycle waste and raise the ground level.
- Once I have proven a completely circular farming system with no co2 or phosphate emmisions I will be free too expand too a commercial level with more land further subsidies available for doing same project again.
- I have checked all rules with rvo over keeping animals... I will begin with the green house and the grond verhogen useing transport of dried peat combine with various mushroom waists. In material sent via file transfer website you will find plenty of known methods for for use of mushrooms for heating greenhouses as well as cleaning up farm animal waist.

- Gementee landsmeer verguningsvrij gebouw wet states recht van de boer biljage II zijn mogelijk in de achter erfgebied.

- I've currently been waiting 8 months for a water connection.... this is discrimination as location I'm asking too use is necessary due too low water pressure in area with PWN. And is currently in use for the water pump and other voorzieningen for ijperveld. Either is needed water connection or a noodweg(at minimum) for 30 ton boringen truck too come drill well(erkend waterbron bedrijf verplicht).

THANK YOU FOR YOUR HELP!!

I have printed out subsidie applications and contacted people from rvo about hobby farm laws.

Later today will get alot of files sent via file transfer website.i will divide them into different categories for your reading.

The initial calculations I have done are very very positive. Farmers using these technics could clean up the entire ijperveld in no time, would save the e.u. and province noord holland loads of money, as well as create a massive about of revenue from the land... meanwhile preserving the landschaplijke waarde. With in 2 years I will be the only certified circular, natuur beneficial veenweide company in holland..... with this knowledge and plans I can take program nationwide with help of dutch government and farmers who want too innovate. I would be able too retire on less then 1 percent of the potential revenue or savings generated just in consulting capacity alone.

Call me with any questions I can explain all in Dutch... calculations I've made are amazing farm actually becomes a type of recycling center producing veengrond... co2 negative farming... implications in holland are massive... farms don't need to close just coordinate and change logistics.

Geachte [redacted]

Op 31 december 2022 ontvingen wij van u melding Activiteitenbesluit met kenmerk AIM-sessie: Aimvz24ml00 voor activiteiten op het adres [redacted] te Den Ijp.

Uit uw melding kunnen wij niet opmaken om welke activiteiten het gaat.

Kunt u ons de volgende gegevens nog aanleveren:

- Naam van het bedrijf/soort bedrijf
- Activiteiten die plaats vinden

Met vriendelijke groet,

[redacted]
